

Spaces designed for how children grow

1+ Acre of Outdoor Space

Nature-based learning builds physical confidence, scientific thinking, and emotional regulation in ways four walls simply can't replicate.

Wild Lilac has 4 separate playgrounds, each designed to support a specific developmental stage (infant, wobbler, toddler, preschool).

Additionally, we have an outdoor classroom, a meadow, a forest patch, and our very own greenhouse and garden. Children of all ages get to explore these spaces daily.

The garden produces about 20% of produce consumed by kids during the growing season.

Multiple Specialized Studios

Rather than one all-purpose classroom, Wild Lilac offers dedicated spaces – for art, for science, music, cooking and movement.

We even have a dedicated sensory room to support physical and emotional regulation.

Specialized studios allow children to go deep into a domain, return to work-in-progress, and develop genuine expertise.

Your child isn't just "doing art." They're becoming an artist.

Food & Nutrition

Our chef of nearly 20 years prepares healthy, organic, locally sourced, and scratch-made meals in our commercial kitchen. Children and teachers eat together "family style," building community, social skills, body awareness, and food literacy.

Similar tuition. A different world.

When you're comparing programs, compare what the money actually creates. Highly staffed classrooms. Smaller groups. Teachers who stay. More than an acre of garden and other outdoor space to explore. Studios built for deep work. And wages that say every child – at every age – deserves an excellent teacher.
